Monitoring of GPS / Position

Target release	1.0
Epic	⚡ **S3GP-8** - Monitoring of GPS / Position `TO DO`
Document status	**ACCEPTED**
Document owner	Jordi Huntjens
Designer	
Developers	*Lead developer*
QA	

Goals

- To see if an asset has breached its route parameters

Background

Why are you doing this?

- A manager wishes to be notified if an asset has gone outside of its designated route

Assumptions

- Users will primarily access this feature from a tablet or laptop.

Requirements

#	Title	User story	Importance	Notes
1	Add SLA constraint to route	As a manager, I want to be able to define a constraint-based on given parameters to route, so I can get notified when a breach occurs. 🔖 **S3GP-24** `DONE`	Should	Parameters: • deviation distance from the route? • Amount of allowed deviations before notification.

User interaction and design

TBD

Questions

Hieronder vind je een lijst met vragen die moeten worden beantwoord als resultaat van dit document met vereisten:

Questions	Resolution
Are there more constraints on a route we should define?	Max range the driver can move from the given route, the amount of time before it counts as a violation, frequency of violations before it counts as a breach.

Won't do
